

PLEASE REVIEW

“FISH PROTECTION SCREEN GUIDELINES”

In 1999, the governor's Salmon Recovery Office commissioned the Departments of Fish and Wildlife (WDFW), to develop technical assistance guidance documents for the protection and restoration of salmonids and their habitat. In an effort to keep these documents current WDFW has completed a draft update to the June 2000 version of the screening guidelines. Once complete this document will be added to the list of WDFW's Aquatic Habitat Guidelines (AHG) that is available online. WDFW is requesting peer review and comments from people outside of our agency. If you are able to help please use tracked changes and when complete change the file name to reflect your name or initials. We will accept comment until January 15 2010. Thank you in advance for this much appreciated and very important assistance.
